

# 電気情報工学基礎演習B

## Control a Mobile Robot: Lecture 4

Instructor: 蔡 凱

TA: 川村 聡志

# Week 4

- AvoidObstacles control

# Obstacles

- `settings.xml`:
  - `<obstacle>`
    - `<pose x="-0.5" y="-0.8" theta="0" />`
    - `<geometry>`
      - `<point x="0" y="0" />`
      - `<point x="1" y="0" />`
      - `<point x="1" y="0.5" />`
      - `<point x="0" y="0.5" />`
    - `</geometry>`
  - `</obstacle>`

# Obstacles

- `settings.xml`:
  - `<obstacle>`
    - `<pose x="-0.5" y="-0.8" theta="0.79" />`
    - `<geometry>`
      - `<point x="0" y="0" />`
      - `<point x="1" y="0" />`
      - `<point x="1" y="0.5" />`
      - `<point x="0" y="0.5" />`
    - `</geometry>`
  - `</obstacle>`

# Avoid Obstacle

- Objective: steer the robot **away from nearby obstacles**

Assume robot is moving at linear velocity  $v=\text{constant}$ .

We only control robot's angular velocity  $w$ :  $\frac{d\theta}{dt} = u(t)$ , control input

# AvoidObstacles Controller

$$v^*(t) = v_1(t) + \dots + v_9(t)$$

# AvoidObstacles Controller

$$v^*(t) = \text{weight}_1 v_1(t) + \dots + \text{weight}_9 v_9(t)$$

$$\theta^*(t) = \tan^{-1} \left( \frac{v_y^*(t)}{v_x^*(t)} \right)$$

Use P-controller  $u(t) = K_p(\theta^*(t) - \theta(t))$  to achieve  $\theta(t) \rightarrow \theta^*(t)$

# Code

- +simiam/+controller/AvoidObstacles.m
  - function obj = AvoidObstacles()  
% Input your code below %  
%%%%%%%%%%  
% Propositional control gain %  
**obj.Kp = 0;** (change this to see what happens)  
%%%%%%%%%

# Code

- +simiam/+controller/AvoidObstacles.m

– function outputs = execute(...)

% Input your code below %

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

% Weights for the nine sensors %

**sensor\_gains = [1 1 1 1 1 1 1 1 1];**

(change this to see what happens)

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

%Distances sensed by the nine sensors:

ir\_distances = robot.get\_ir\_distances()

# Have Fun

- **Change** robot's initial pose and obstacle pose in settings.xml
- **Set** robot's linear speed in K3Supervisor.m
- **Adjust** control gain parameter in AvoidObstacles.m
- **Adjust** sensor weights in AvoidObstacles.m
